

## 2017 Q1 (January - March) Monitoring Results

### Air Quality Health Index (AQHI) Ratings

The AQHI describes the level of health risk associated with an AQHI number. The levels are low, moderate, high or very high. The higher the index number, the greater the health risks. Go to [our website's AQHI page](#) for more information. Five of FAP's nine continuous air monitoring stations monitor substances whereby AQHI can be calculated.

Station Name	Hours Monitored	Risk Level (% of time in each)			
		Low	Moderate	High	Very High
Bruderheim	2086	99.43%	0.48%	0.10%	-
Elk Island	1937	97.47%	2.53%	-	-
Fort Saskatchewan	1909	88.48%	11.41%	0.10%	-
Gibbons	2071	93.34%	6.66%	-	-
Lamont County	2094	99.28%	0.62%	0.10%	-

### Hours with a High or Very High Risk AQHI Rating

This table shows the number of hours of high or very high AQHI rating during Q1 of 2017, when they occurred and the likely cause.

## Summary of Exceedances

Air quality measurements are compared hourly to the [Alberta Ambient Air Quality Objectives](#) (AAAQO). Any exceedance of an AAAQO is reported to the Alberta Government and the cause of the exceedance investigated.
